PRELIMINAR OBSERVATIONS:

This is the output of the example program II_SExpStructConst_sl2_S990.java.
It performs expansions of the sl(2) algebra,
[X_{1},X_{2}]= -2 X_{3} ,
[X_{1},X_{3}]= 2 X_{2} ,
[X_{2},X_{3}]= 2 X_{1} ,
with the semigroup S_{5}^{990}, whose multiplication table is given by:
1 1 1 1 1
1 2 3 4 5
1 3 2 5 4
1 4 5 2 3
1 5 4 3 2
The resonance that will be considered is:
S0 = {1,2,5}, S1 = {1,3,4},
and the zero element is: 1.

It gives the structure constants C_{(i,a)(j,b)}^{(k,c)}} of:
1) Expanded algebra
2) Resonant subalgebra
3) Reduced algebra
4) Reduction of the resonant subalgebra

NOTATION:

Using i,j,k=1,...,n and a,b,c=1,...,m, the structure constants of the expanded
algebra will be given as follows:
We first give m matrices C_{(1,a)(j,b)}^{(k,c)}
C_{(1,1)(j,b)}^{(k,c)}, C_{(1,2)(j,b)}^{(k,c)}, ..., C_{(1,m)(j,b)}^{(k,c)}}
Then the m matrices C_{(2,a)(j,b)}^{(k,c)}}
C_{(2,1)(j,b)}^{(k,c)}, C_{(2,2)(j,b)}^{(k,c)}, ..., C_{(2,m)(j,b)}^{(k,c)}}
and thus we continue until giving the m boxes C_{(n,a)(j,b)}^{(k,c)}}
C_{(n,1)(j,b)}^{(k,c)}, C_{(n,2)(j,b)}^{(k,c)}, ..., C_{(n,m)(j,b)}^{(k,c)}

In a similar way we give the selectors of the reduced algebra, resonant subalgebra
and reduction of
the resonant subalgebra, omitting the rows and comumns (i,a) that are not in the
corresponding algebra.
The range where the indices (i,a) are running is indicated for each case 1-4.

Finally, we remind that the method 'setStructureConstant()' reads the non-vanishing
structure constants C_{ij}^{k}
in such a way that i,j,k=0,1...,n-1. They are introduced as follows:

name.setStructureConstant(i , j , k , C_{ij}^{k})

Similarly a,b,c=0,1,...,m-1 in the functions C_{(i,a)(j,b)}^{(k,c)}.
However, the outputs will be given in such a way that i,j,k=1,...,n and
a,b,c=1,...,m.

We introduce the structure constants of sl2.
Remind that if a non vanishing structure constant C_{ij}^{k} has the
value V, then we introduce it as: name.setStructureConstant(i-1 , j-1 , k-1 , V)

Show its Killing-Cartan metric

```
 -8.00 0.00 0.00
 0.00 8.00 0.00
 0.00 0.00 8.00

whose determinant is:
-512.0

-------------------
NOTATION for the Expanded algebra:

n = 3 , Dimension of the original Lie algebra.
m = 5 , Order of the semigroup.

To print the structure constants notice that for (i,a) fixed,
the quantities C_{(i,a)(j,b)}^{(k,c)}=M_{A,B} are elements
of a matrix M whose indices have the following values:
A,B = 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15,
Or equivalently,
A,B = (1,1), (1,2), (1,3), (1,4), (1,5), (2,1), (2,2), (2,3), (2,4), (2,5), (3,1),
(3,2), (3,3), (3,4), (3,5),

Here we print the m tables C_{(1,a) (j,b)}^{(k,c)}, with a=1,...,m.

NOTATION for the Resonant Subalgebra:

n = 3 , Dimension of the original Lie algebra.
m = 5 , Order of the semigroup.

To print the structure constants notice that for (i,a) fixed,
the quantities C_{(i,a)(j,b)}^{(k,c)}=M_{A,B} are elements
of a matrix M whose indices have the following values:
A,B = 1, 2, 5, 6, 8, 9, 11, 13, 14,
Or equivalently,
A,B = (1,1), (1,2), (1,5), (2,1), (2,3), (2,4), (3,1), (3,3), (3,4),

Here we print the matrices C_{(1,a) (j,b)}^{(k,c)}, with the double indices having
the values described above.

-------------------

NOTATION for the Reduction of the Resonant Subalgebra:

n = 3 , Dimension of the original Lie algebra.
m = 5 , Order of the semigroup.

To print the structure constants notice that for (i,a) fixed,
the quantities C_{(i,a)(j,b)}^{(k,c)}=M_{A,B} are elements
of a matrix M whose indices have the following values:
A,B = 2, 5, 8, 9, 13, 14,
Or equivalently,
A,B = (1,2), (1,5), (2,3), (2,4), (3,3), (3,4),

Here we print the matrices C_{(1,a) (j,b)}^{(k,c)}, with the double indices having
the values described above.
